Carpets to meet even the most exquisite taste

Floors, walls and ceilings are the basic building blocks that set the tone for the entire room. The carpet provides the foundation for soundproofing and absorbing footstep noise.

Depending on its pile length and density, carpet can also reinforce the upscale impression. Although an unlimited selection of colors and patterns exists to match individual taste, you should always consider the ease of care when making your selection.

Let the sunshine in or keep it out

When choosing window treatments, practical and aesthetic considerations often clash. We can help by drawing on our many years of experience in a broad range of applications. Manufacturers are constantly finding new solutions for the widest variety of tasks.

Curtains can have a representative character; horizontal or vertical blinds can be used to block the rays of the sun in computer rooms. Here, too, the color and design possibilities are endless.
